

# SCHWINGELEMENT TYP OM

## OSCILLATING MOUNT TYPE OM

### RESATEC SCHWINGELEMENT TYP OM:

Die RESATEC Schwingelemente Typ OM sind die Kopfstücke eines Lenkerarms und für den Einsatz in einem Einmassen-Schwingsystem bis zur Schwingmaschinenkennzahl 1,6 oder im Resonanzbetrieb bis 2,2 geeignet. Die Flansche werden direkt an der Rinne und an der Maschinenstruktur angeschraubt. In die Gewinde lassen sich beliebig lange Verbindungsstangen (kundenseitig hergestellt) einbringen. Durch die Verwendung der Schwingelemente OM, einseitig mit Rechts- und gegenüberseitig mit Linksgewinde, kann der Achsabstand stufenlos nivelliert werden.

### RESATEC OSCILLATING MOUNT TYPE OM:

The RESATEC oscillating mount type OM are the head pieces of a rocker arm and are suitable for use in a single-mass crank shaft driven conveyor system up to oscillating machine index 1.6 or in resonance mode up to 2.2. The flanges are bolted directly to the trough and to the machine structure. Connecting rods of any length (made by customer) can be inserted into the threads. By using the swinging elements OM, one side with right-hand thread and the other side with left-hand thread, the center distance can be continuously leveled.
