

Integrated Step Motors

Motor + Encoder + Driver + Controller

The STM is an integrated all-in-one solution, fusing step motor and drive technologies into a single device, offering savings on space, wiring and cost over conventional motor and drive solutions.

Anti-Resonance
Microstep Emulation
Dynamic Current Control

Torque Ripple Smoothing
Stall Detection and Stall Prevention
Command Signal Smoothing

Anti-Resonance

Step motor systems have a natural tendency to resonate at certain speeds. The STM drive+motor automatically calculates the system's natural frequency and applies damping to the control algorithm. This greatly improves midrange stability, allows for higher speeds, greater torque utilization and also improves settling times.

Delivers better motor performance and higher speeds

Microstep Emulation

With Microstep Emulation, low resolution systems can still provide smooth motion. The drive can take low-resolution step pulses and create fine resolution micro-step motion.

Delivers smoother motion in any application

Torque Ripple Smoothing

All step motors have an inherent low speed torque ripple that can affect the motion of the motor. By analyzing this torque ripple the system can apply a negative harmonic to negate this effect, which gives the motor much smoother motion at low speed.

Delivers smoother motion at lower speeds

Command Signal Smoothing

Command Signal smoothing can soften the effect of immediate changes in velocity and direction, making the motion of the motor less jerky. An added advantage is that it can reduce the wear on mechanical components.

Delivers smoother system performance

Dynamic Current Control

Allows for three current settings to help the motor run cooler and reduce power consumption.

- Running Current - the current the drive will deliver for continuous motion.
- Accel Current - the current the drive will deliver when accelerating or decelerating.
- Idle Current - reduces current draw when motor is stationary.

System runs cooler

Self Test & Auto Setup

At start-up the drive measures motor parameters, including the resistance and inductance, then uses this information to optimize the system performance.

Control Options

Step & Direction

S

- Step & direction
- CW & CCW pulse
- A/B quadrature(master encoder)

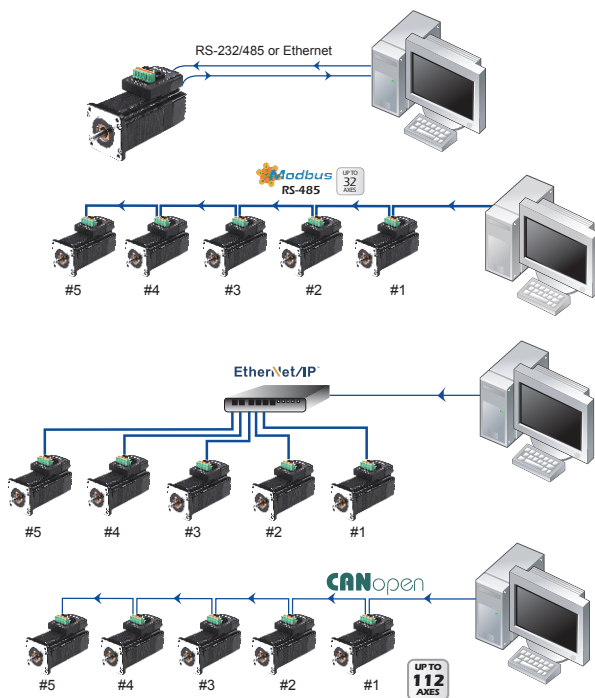

Oscillator / Run-stop

S

- Software configuration
- Two speeds
- Vary speed with analog input
- Joystick compatible

Host Control

S

Q

RS-232

- Accept serial commands from host PC or PLC

RS-485 or Modbus/RTU network

- Accept serial commands from host PC or PLC
- Multi-axis capable, up to 32 axes

Q

IP

- Accepts streaming commands from host PC or PLC
- 1000's of axes with Ethernet and EtherNet/IP

C

CANopen Model

- Connect to CANopen network
- CiA301 and CiA402 protocols
- Multi axle bus, up to 112 axis

Stand-Alone Programmable

Q

IP

- Comprehensive text based language
- Download, store & execute programs
- High level features: multi-tasking, conditional programming and math functions
- Host interface while executing stored programs

STM11

Integrated Stepper

- NEMA 11 frame size
- Torque: up to 100 mN•m
- Input voltage: 24 VDC

STM11 Dimensions (Unit : mm)

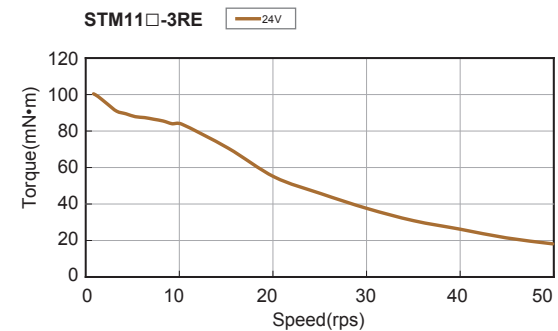

Model	"L"
STM11□-1RE	43.8
STM11□-2RE	52.9
STM11□-3RE	64.1

STM11 Torque Curves

Connections Pin-out

Power supply, communication & I/O port	

STM11 Technical Specifications

Power Amplifier	
AMPLIFIER TYPE	Dual H-Bridge, 4 Quadrant
CURRENT CONTROL	4 state PWM at 16 KHz
OUTPUT TORQUE	STM11□-1RE up to 50 mN.m STM11□-2RE up to 60 mN.m STM11□-3RE up to 100 mN.m
POWER SUPPLY	External 24 VDC power supply required
INPUT VOLTAGE RANGE	15 - 30 VDC min/max (nominal 24 VDC)
PROTECTION	Over-voltage, under-voltage, over-temp, internal motor shorts (phase-to-phase, phase-to-ground)
IDLE CURRENT REDUCTION	Reduction range of 0 - 90% of running current after a delay selectable in milliseconds
AMBIENT TEMPERATURE	0 - 40 °C (32 - 104 °F) when mounted to a suitable heatsink
HUMIDITY	90% non-condensing
Controller	
CURRENT CONTROL	Advanced digital current control provides excellent high speed torque
MICROSTEP RESOLUTION	Software selectable from 200 to 51200 steps/rev in increments of 2 steps/rev
SPEED RANGE	Speeds up to 50 rps
DISTANCE RANGE	Over 10,000,000 revolutions (at 200 steps/rev)
NOISE FILTERING	Programmable hardware digital noise filter. Software noise filter
SERIAL COMMANDING	Supports Serial Command Language (SCL)
ENCODER FEEDBACK	4000 counts/rev encoder feedback
NON-VOLATILE STORAGE	Configurations are saved in FLASH memory on-board the DSP
X1/STEP	Input: 5 - 24 VDC, single-ended signals, max. pulse frequency 1 MHz Functions: Step, CW Step, A Quadrature, CW Limit, CW Jog, Run/Stop, general purpose input; adjustable bandwidth digital noise rejection filter Connect with NPN type output ONLY
X2/DIRECTION	Input: 5 - 24 VDC, single-ended signals, max. pulse frequency 1 MHz Functions: Dir, CCW Step, B Quadrature, CCW Limit, CCW Jog, general purpose input; adjustable bandwidth digital noise rejection filter Connect with NPN type output ONLY
X3/ENABLE	Input: 5 - 24 VDC, single-ended signals, max. pulse frequency 1 MHz Functions: Enable, Change speed, general purpose input Connect with NPN type output ONLY
X4/ALARM RESET	Input: 5 - 24 VDC, single-ended signals, max. pulse frequency 1 MHz Functions: Alarm reset; general purpose input Connect with NPN type output ONLY
Y1	Open drain output, maximum current 100mA with maximum voltage of 30VDC Functions: Fault detection, general purpose
Y2	Open drain output, maximum current 100mA with maximum voltage of 30VDC Functions: Brake, Moving, Tach Output, general purpose
COMMUNICATION INTERFACE	RS-422/485
WEIGHT	STM11□-1RE: 118 g STM11□-2RE: 168 g STM11□-3RE: 218 g
ROTOR INERTIA	STM11□-1RE: 9 g·cm ² STM11□-2RE: 12 g·cm ² STM11□-3RE: 18 g·cm ²

ST Configurator

Software Features

- Intuitive interface
- Drive status and alarm monitoring
- Self-test function to test drive/motor operation
- Built-in SCL Terminal
- Online help integrated

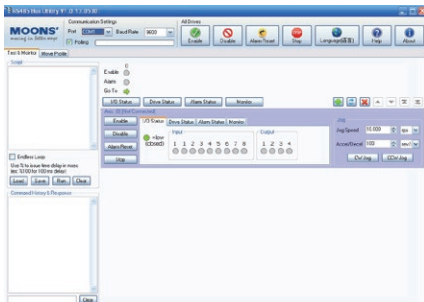

Q Programmer

Software Features

- Single-axis motion control
- Stored program execution
- Multi-tasking
- Conditional processing
- Math functions
- Data registers
- Motion Profile simulation
- Online help integrated

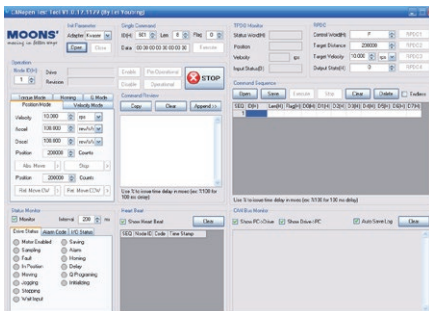

RS485 Bus Utility

Software Features

- Stream SCL commands from the command line
- Simple interface with powerful capability
- Easy setup with RS-485 for 32 axis network motion control
- Monitoring Status of I/O, drive, alarm and the other nine most useful motion parameters
- Write and save SCL command scripts
- Online help integrated
- Supports all RS-485 drives

CANopen Test Tool

Software Features

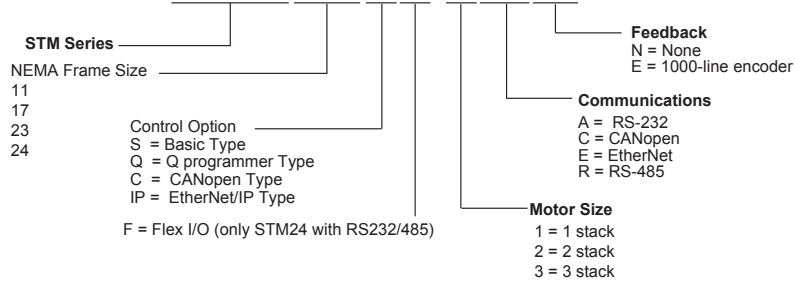

- Friendly User Interface
- Multiple operation Mode Support
- Multi-Thread, High Performance
- CAN bus monitor and log function
- Kvaser/PEAK adapter support

STM-S/Q/C/IP

The STM integrated steppers are offered with an optional 1000-line incremental encoder. On STM-S/Q/C/IP models this encoder is integrated into the housing of the motor, without increasing the overall size of the unit. The addition of this encoder provides the following enhanced functionality:

Stall Detection notifies the system as soon as the required torque is too great for the motor, resulting in a loss of synchronization between the rotor and stator, also known as stalling. As soon as the motor stalls the drive triggers its fault output. See Figure 1.

Stall Prevention automatically adjusts the excitation of the motor windings to maintain synchronization of the rotor and stator under all conditions. This means that motor position is maintained and corrected even when the required torque is too great for the motor. The stall prevention feature also performs position maintenance, which maintains the position of the motor shaft when at rest. See Figure 2.

Figure 1: Diagram showing the Stall Detection process

Figure 2: Diagram showing the Stall Prevention process

RC-880 Regeneration Clamp

Many motor and drives systems require a clamp circuit to limit increase in power supply voltage when the motor is decelerating under load. This is commonly referred to as "regeneration", and occurs when DC motors are driven by their load (backdriving). During regeneration the DC motor can produce enough voltage to actually exceed the input power supply voltage. MOONS' drives can deal with regeneration by channeling the increased motor voltage back to the source power supply. However, if the voltage is not clamp to a safe level the power supply and/or drive can be damaged or destroyed.

Max. Supply Voltage: 80V
 Max. Output Current: 8A(rms)
 Continuous Power: 50W
