# Dawn of MOONS' 3A Era

## 1st A Motion Products & Motion Control Products for Manufacturing Automation

MOONS' is a leading manufacturer of the key parts, components and system level products used in manufacturing automation including: Stepper Motor and Drive, Brushless Motor and Drive, AC Servo Motor and Drive, Integrated solutions. We continue to play a major role in the manufacturing automation field with us moving forward to being a system level provider of total motion control solutions.

## 2nd A Intelligent LED Driver & Control Technologies for LED Lighting Management Automation

## 3rd A Online Asset Monitoring, Fault Detection and Diagnosis Solutions for EAM Automation

## MOONS' Business Philosophies

- Customer satisfaction
- Employee satisfaction

MOONS' aims to enhance customer satisfaction through the provision development of innovative solutions, manufacture of high quality products, and ontime delivery and outstanding customer support.

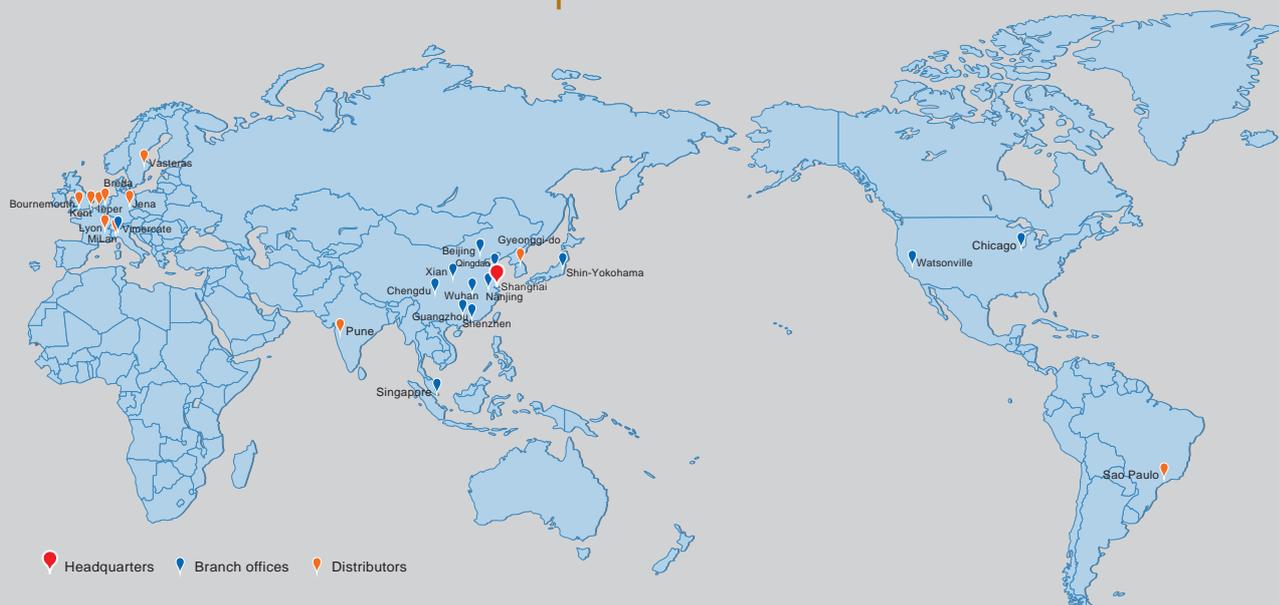

- Partnership

MOONS' values and respects our employees input and encourages them to grow together with the company. We have been working to develop tools and trainings to build a thriving culture of excellence internally to support the future growth of our employees and the company.

- Partnership

MOONS' strongly believes in a true integrated partnership between all partners in business including customers, distributors and all these in supply chain. As a result of our this philosophy, we endeavor to provide the best value contribution to all partners, which can help our partners improve their competitiveness to achieve the win-win situation.

## Worldwide service map

## *moving in better ways*

To demonstrate our commitment to our community and our customers, **MOONS'** has adopted as our official slogan: "Moving in Better Ways". These words have following meanings to **MOONS'**:

- **MOONS'** is an excellent global manufacturer of control motor & control motor drive system
- **MOONS'** is a leading global supplier of intelligent LED lighting control system and drive solutions
- **MOONS'** is a well-recognized reliable provider of system solutions for the intelligent system management in large asset-intensive industrial enterprises

We provide superior motion control systems to our global customers through optimizing of product design, engineering, and manufacturing. This is done by strengthening process and quality control and constantly creating solutions using motion control products that are more energy efficient and environmental friendly.

We provide leading-edge LED lighting drivers, controls and management solutions. Our leading lighting control technology makes the drive professional, convenient to use, and more energy efficient in reducing costs and enhancing profits for global customers.

We provide management system solutions for large asset-intensive industries including power generation, petrochemical, metallurgy, coal and large scale agriculture.

- **We are an ambitious and enterprising company**

**MOONS'** never stops the on-going accelerated pace to improve processes and increase efficiency. Through scientific management methodologies and tools and incorporating advanced technology with senior management experience, we constantly optimize management processes that enable **MOONS'** to maintain on-going growth in competitive markets.

- **We are a cooperative and thriving group**

All members of our team are able to incorporate the concept of moving in better ways during work, they continually upgrade our collective values, and strive for excellence in the process of doing business to improve expertise and gain better opportunities.

## Motion Control Products and Solutions

**MOONS'** provides a wide range of motion control products and solutions serving the fields of printing, intelligent stage lighting, textile machinery, consumer appliance, banking equipment, factory automation, electronics, semiconductor equipment, packaging machinery, medical equipment and measuring equipment, to name a few.

Entering into the hybrid stepper motor business in 1997, **MOONS'** has grown to where it is now one of the top 5 global manufacturers of stepper motors, and an integrated provider of related motion control products and solutions.

**MOONS'** has been and is concentrating on technological advancement, product design innovation and improvement for standard and customized motion control products and solutions. Cutting edge technologies, product improvement and scientifically proven management systems permit **MOONS'** to exceed customers' requirements around the world. **MOONS'** supports our growing customer base by providing exceptional quality, application engineering, rapid prototyping, regional warehousing and competitive pricing.

# Introduction to Stepper Motors

A stepper motor is an electromechanical device which converts electrical pulses into discrete mechanical movements. The shaft of a stepper motor rotates in discrete step increments when electrical command pulses are applied to it in the proper sequence.

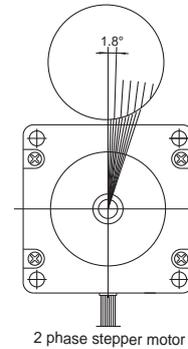

Stepper motors are the easiest devices for precise positioning control. They are widely being used in various application for position and speed via all kinds of control signals such as digital, analog, communication etc.

## ■ Features

### ◇ Precise Positioning Control

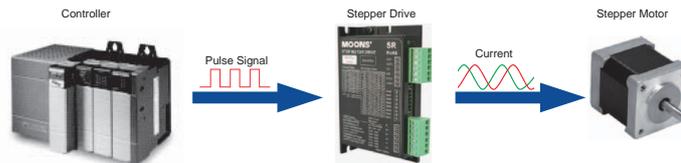

A stepper motor rotates with a fixed step angle, just like the second hand of a clock. This angle is called "basic step angle." MOONS' offers several types of "basic step angle" as standard motors: 2-phase stepping motors with a basic step angle of 0.9° and 1.8° and 3-phase stepping motors with a basic step angle of 1.2°.

Besides the standard motor, MOONS' also has stepper motors available with other "basic step angle." They are 0.72°, 1.5°, 3.6° and 3.75°, these motors are not listed in this catalogue, please contact MOONS' for details.

### ◇ Easy Control with Pulse Signals

A system configuration for high accuracy positioning is shown below. The rotation angle and speed of the stepping motor can be controlled accurately using pulse signals from the controller.

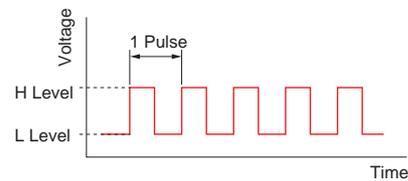

### ■ What is a Pulse Signal?

A pulse signal is an electrical signal whose voltage level changes repeatedly between ON and OFF.

Each ON/OFF cycle is counted as one pulse. A command with one pulse causes the motor output shaft to turn by one step.

The signal levels corresponding to voltage ON and OFF conditions are referred to as "H" and "L," respectively.

### ■ The length of Rotation is Proportional to the Number of Pulses

The length of rotation of the stepping motor is proportional to the number of pulse signal (pulse number) given to the driver.

The relationship of the stepper motor's rotation (rotation angle of the motor output shaft) and pulse number is expressed as follows:

$$\theta = \theta_s \times A$$

$\theta$  : Rotation angle of the motor output shaft [deg]  
 $\theta_s$  : Step angle [deg/step]  
 $A$  : Pulse number [pulses]

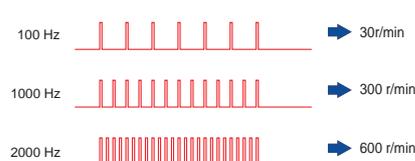

### ■ The Speed is Proportional to the Pulse Frequency

The speed of the stepper motor is proportional to the frequency of pulse signals given to the driver.

The relationship of the pulse frequency [Hz] and motor speed [r/min] is expressed as follows:

$$N = \frac{\theta_s}{360} \times f \times 60$$

$N$  : Speed of the motor output shaft [r/min]  
 $\theta_s$  : Step angle [deg/step]  
 $f$  : Pulse frequency [Hz]  
 (Number of pulses input per second)

◇ Generating High Torque with a Compact Size

Stepper motors generate high torque with a compact size.

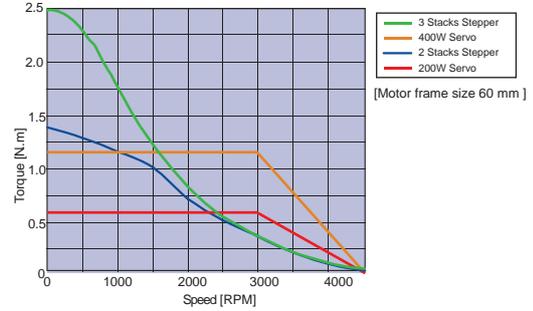

These features give them excellent acceleration and response, which in turn makes these motors well-suited for torque-demanding applications where the motor must be started and stopped frequently.

To meet the need for greater torque at low speed, MOONS' also has geared motors option.

- Frequent Starting/Stopping is Possible

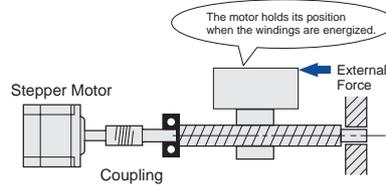

- Speed VS Torque Characteristics comparison between servo and stepper with same motor size.

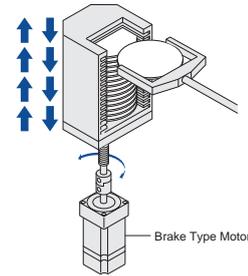

◇ The Motor Holds Itself at a Stopped Position

Stepper motor has full torque at stand-still as long as the windings are energized. This means that the motor can be held at a stopped position without using a mechanical brake.

◇ Motor with Electromagnetic Brake

Once the power is cut off, the self-holding torque of the motor is lost and the motor can no longer be held at the stopped position in vertical operations or when an external force is applied. In lift and similar applications, an electromagnetic brake type motor is required.

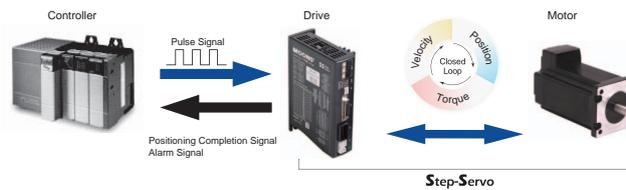

◇ Closed Loop Servo Control Stepper Motors

**Step-Servo**

The **Step-Servo** is an innovative revolution for the world of stepping motor, it enhances the stepping motor with servo technology to create a product with exceptional feature and broad capability.

The **Step-Servo** greatly improves the performance to be much more Intelligent, Efficient, Compact, Accurate, Fast and Smooth.

## ■ Stepper Motor Category

Stepper motors come in different types including the basic type, encoder type, IP65 type, Integrated type with drive and controller, brake type and geared type. The availability of all options can also be combined together as the most optimize and compact motion control unit, for example, MOONS' can offer encoder and geared type, IP65 integrated with drive, controller and encoder, all combinations are available per request.

<p>◇ Basic Type</p> <p>A basic model that is easy to use and designed with a balanced set of functions and characteristics.</p>	
<p>◇ Encoder Type</p> <p>Encoder type stepper gives the possibility for closed loop control, encoder feedback signals can be used for position verification and enhanced performance as stall detection and stall prevention depending on the features of the drive.</p>	
<p>◇ IP65 Type</p> <p>IP65 type stepper motors with the feature of dust proof and resistant to low pressure water jets, are ideal for applications in wet factory environments such as the food and beverage industry or outdoor use.</p> <p>IP65 specifies a product that is dust tight (no ingress of dust; complete protection against contact) and protected against water jets (water projected by a nozzle from any direction shall have no harmful effects).</p>	
<p>◇ Integrated Type with Drive and Controller</p> <p>Integrated stepper motors offer a space-saving design that reduces wiring and saves on cost over separate motor and drive components. For controller type, you only need cable connection for Power and necessary communication or sensor depending on application, it also cost for host controller and make it easy for you to setup sofiscated motion control system.</p>	
<p>◇ Brake Type</p> <p>These motors incorporate a non-excitation type electromagnetic brake. When the power is accidentally cut off due to power outage or other unexpected event, the electromagnetic brake holds the load in position to prevent it from dropping or moving. Brake type steppers are wildly used in vertical axis application.</p>	
<p>◇ Geared Type</p> <p>These motors incorporate a dedicated position-control gearhead with reduced backlash to make the most of the high controllability of the motors.</p> <p>The gearhead ensures highly accurate, smooth operation even in applications where a large torque is received.</p>

## Control Modes for Drives

With MOONS' advanced stepper drive technology, each stepper motor can be operated under various control modes as position control, velocity control or torque control. MOONS' stepper drive accepts all types of control signals including digital, analog and Industrial network communications. Built-in controller Q drive supports stand alone operation for single axis motion by stored sofiscated program execution.

### ◇ Pulse Control

Pulse control is a traditional way to command a stepper motor in position and velocity control. The length of rotation is proportional to the number of pulses as well as the speed is proportional to the pulse frequency.

Three most popular pulse control digital signal types are Pulse & Direction, CW/CCW Pulse and A/B Quadrature.

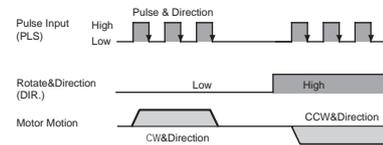

#### ■ Pulse & Direction

When the Pulse input is turned ON while the DIR input is ON, the motor will rotate by one step in one direction.

When the Pulse input is turned ON while the DIR input is OFF, the motor will rotate by one step the other direction.

\*Direction definition of DIR input can be configured via MOONS' software.

The chart below shows motor configured as while the DIR input is ON, the motor will rotate by CW direction.

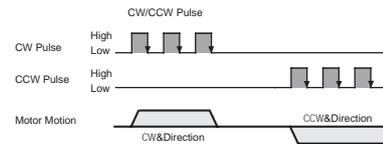

#### ■ CW/CCW Pulse

When the X1 input is turned ON, the motor will rotate by one step in One direction. When the X2 input is turned ON, the motor will rotate by one step in the other direction.

\*Direction definition can be configured via MOONS' software.

The chart below shows motor configured as while the X1 input is ON, the motor will rotate by one step in CW direction.

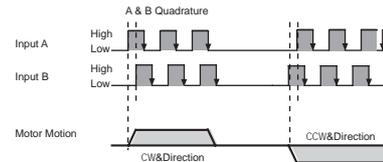

#### ■ A & B Quadrature

The motor will move according to signals that are fed to the drive from a two channel increamental master encoder.

Direction definition can be configured via MOONS' software. Direction is determined via which channel leads the other.

The chart below shows motor configured as while X1 Leads X2, the motor will rotate by CW direction.

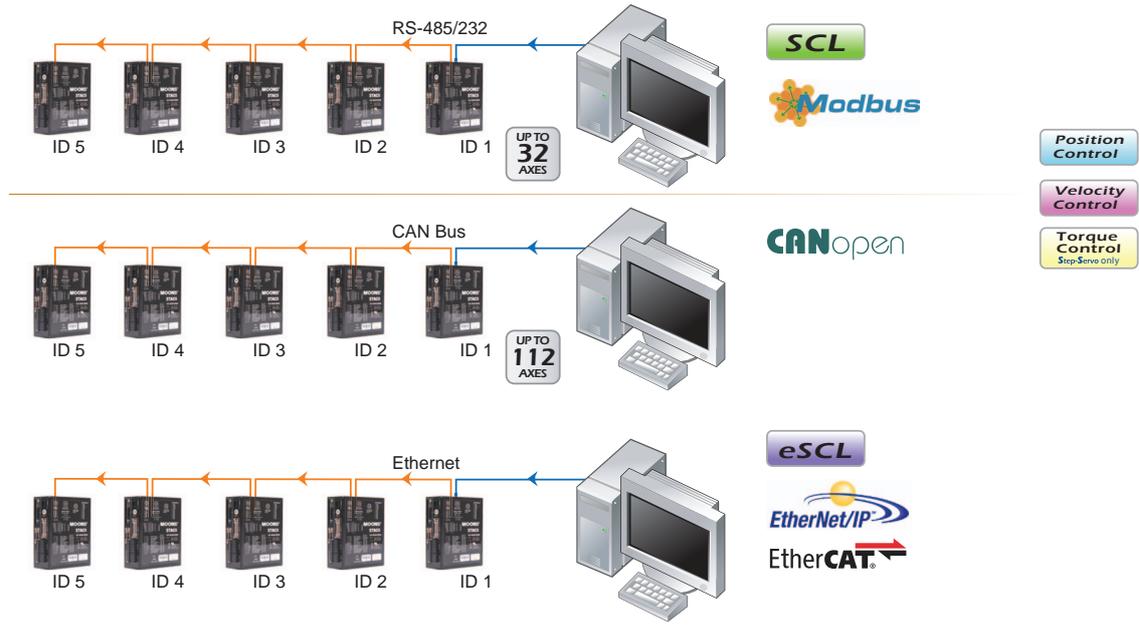

### ◇ Analog Control

MOONS' stepper drive has the ability to accept analog signal for position and analog control, **Step-Servo** can also use analog signal for torque control.

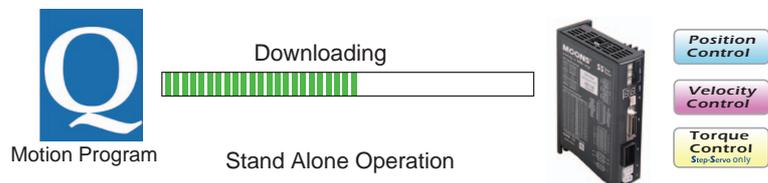

◇ Field Bus Control

MOONS' stepper drive supports all popular Industrial network communications including RS-485, Modbus, CAN , Ethernet and EtherCAT.

◇ Stand Alone Operation

MOONS' Built-in controller Q drive supports stand alone operation for single axis motion by stored sofiscated program execution. It has the ability to run up to 744 lines of stored Q program in non-volatile memory. Q programs are created using the Q Programmer software, which provides multi-tasking, math calculations using analog and digital parameters, conditional processing, data register manipulation, and more features in a robust yet simple text-based programming language.

Overview of MOONS' Stepper Products

Closed Loop Step-Servo

TSM Series - Integrated Step-Servo

**Frame Size:** 28mm, 42mm, 56mm, 60mm, 86mm  
**Input Voltage(Typical):** TSM11:24VDC TSM17:12-48VDC  
 TSM23/24:12-70VDC TSM34: 24-70VDC  
**Encoder:** Incremental 20000 counts/rev  
 (only TSM11 encoder 4096 counts/rev)

**Enhanced Intelligence:**  
 ■ Automatic load inertia detection  
 ■ Extended homing and software limit

**Control Modes:**

- Pulse Control
- Analog Control
- Field Bus Control, Daisy Chain
- Stand alone operation

**Inputs and Outputs:**

- P Type- 4 Digital Inputs, 3 Digital Outputs, Encoder Outputs
- S/Q/C/IP Type- 8 Digital Inputs, 4 Digital Outputs, 1 Analog Input

**Communication:**

SSM Series - Integrated Step-Servo

**Frame Size:** 42mm, 56mm, 60mm  
**Input Voltage(Typical):** SSM17: 12-48VDC SSM23/24: 12-70VDC  
**Encoder:** Incremental 20000 counts/rev

**Easy Wiring with Spring Connectors**

**Control Modes:**

- Pulse Control
- Analog Control
- Field Bus Control
- Stand alone operation

**Inputs and Outputs:**

- S/Q Type- 3 Digital Inputs, 1 Digital Output, 1 Analog Input
- C Type- 3 Digital Inputs, 1 Digital Output

**Communication:**

TXM Series - IP65 Type Integrated Step-Servo

**Frame Size:** 60mm, 86mm  
**Input Voltage(Typical):** TXM24: 12-70VDC TXM34: 24-70VDC  
**Encoder:** Incremental 20000 counts/rev

**Control Modes:**

- Pulse Control
- Analog Control
- Field Bus Control(Daisy Chain for RS-485 and CANopen)
- Stand alone operation

**Inputs and Outputs:**

- S/Q/IP Type- 3 Digital Inputs, 1 Digital Output, 1 Analog Input
- C Type- 5 Digital Inputs, 3 Digital Outputs

**Communication:**

RS Series - Step-Servo Motor & Drive Package

**Motor Frame Size:** 28mm, 42mm, 56mm, 60mm, 86mm  
**Input Voltage(Typical):** 24-70VDC  
**Encoder:** Magnetic 4096 counts/rev

**Enhanced Intelligence:**

- Automatic load inertia detection and switch set stiffness
- Extended homing and software limit

**Control Modes:**

- Pulse Control
- SCL Command Control
- Stand alone operation

**Inputs and Outputs:**

- P Type- 4 Digital Inputs, 3 Digital Outputs, Encoder Outputs
- S/Q Type- 4 Digital Inputs, 3 Digital Outputs

◇ Integrated Stepper Motor

## STM-R Series - Pulse Input Type Integrated Stepper Motor

**Frame Size:** 42mm, 56mm  
**Input Voltage(Typical):** STM17R: 12-48VDC STM23R: 12-70VDC  
**Encoder Option:** Incremental 4000 counts/rev  
**Microstep Resolution:** Switch set, up to 25600 steps/rev  
**Control Modes:**

Position Control

■ Pulse Control

**Inputs and Output:**  
 ■ 3 Digital Inputs, 1 Digital Output

## STM Series - Controller Type Integrated Stepper Motor

**Frame Size:** 28mm, 42mm, 56mm, 60mm  
**Input Voltage(Typical):**

- STM11 - 24VDC
- STM17 - 12-48VDC
- STM23/24 - 12-70VDC

**Encoder Option:** Incremental 4000 counts/rev  
 ■ Stall Detection  
 ■ Stall Prevention

**Microstep Resolution:** Software set, up to 51200 steps/rev

**Control Modes:**  
 ■ Pulse Control  
 ■ Analog Control  
 ■ Field Bus Control  
 ■ Stand alone operation

**Inputs and Outputs:**  
 ■ STM11 4 digital Inputs, 2 Outputs  
 ■ SF/QF Type- 4 Configurable digital Inputs/Outputs, 1 Analog Input  
 ■ S/Q/IP Type- 3 Digital Inputs, 1 Digital Output, 1 Analog Input  
 ■ C Type- 3 Digital Inputs, 1 Digital Output

◇ Two Phase Stepper Drive

**SRAC Series - AC Input Stepper Drive**

- Input Voltage(Typical):** AC120V/240V
- Drive Output Current:** Up to 8Amp(Peak of Sine)
- Microstep Resolution:** Switch set, up to 25600 steps/rev
- Control Modes:**
  - Pulse Control
- Inputs and Outputs:**
  - 3 Digital Inputs, 1 Digital Output
- Supported Motor Frame Size:** 56mm, 60mm, 86mm

Position Control

**STAC Series - AC Input Controller Type Stepper Drive**

- Input Voltage(Typical):** AC120V/240V
- Drive Output Current:** Up to 2.5Amp(Peak of Sine)
- Encoder Option:** Incremental
  - Stall Detection
  - Stall Prevention
- Microstep Resolution:** Software set, up to 51200 steps/rev
- Control Modes:**
  - Pulse Control
  - Analog Control
  - Field Bus Control
  - Stand alone operation
- Inputs and Outputs:**
  - S/Q/C Type- 4 Digital Inputs, 2 Digital Outputs, 1 Analog Input
  - Q-A/IP Type- 12 Digital Inputs, 6 Digital Outputs, 1 Analog Input

Position Control

Velocity Control

**Communication:**

**Supported Motor Frame Size:** 56mm, 60mm, 86mm

**SR Series - DC Input Stepper Drive**

- Input Voltage(Typical):**
  - SR2/SR2-Plus/SR3-mini: 12- 48VDC
  - SR4/SR4-Plus: 24-48VDC
  - SR8/SR8-Plus: 24-80VDC
- Drive Output Current:** Up to 7.8Amp(Peak of Sine)
- Microstep Resolution:** Switch set, up to 51200 steps/rev
- Control Modes:**
  - Pulse Control
- Inputs and Outputs:**
  - 3 Digital Inputs, 1 Digital Output
- Supported Motor Frame Size:**
  - 20mm, 28mm, 35mm, 42mm, 56mm, 60mm, 86mm

Position Control

**STF Series - Intelligent field bus control Stepper Drive**

- Input Voltage(Typical):** DC12V/24V/48V
- Drive Output Current:** Up to 10Amp(Peak of Sine)
- Microstep Resolution:** Software set, up to 51200 steps/rev
- Control Modes:**
  - Field Bus Control
  - Stand alone operation
- Inputs and Outputs:**
  - 8 Digital Inputs, 4 Digital Outputs
- Communication:**

Position Control

Velocity Control

**Supported Motor Frame Size:**

- 20mm, 28mm, 35mm, 42mm, 56mm, 60mm, 86mm

## ST Series - DC Input Controller Type Stepper Drive

**Input Voltage(Typical):** DC24V/48V  
**Drive Output Current:** Up to 10Amp(Peak of Sine)

Position Control

**Encoder Option:** Incremental

Velocity Control

- Stall Detection
- Stall Prevention

**Microstep Resolution:** Software set, up to 51200 steps/rev

**Control Modes:**

- Pulse Control
- Analog Control
- Field Bus Control
- Stand alone operation

**Inputs and Outputs:**

- S type- 3 Digital Inputs, 1 Digital Output, 1 Analog Input
- Q/C/IP- 8 Digital Inputs, 4 Digital Outputs, 2 Analog Inputs

**Communication:**

**Supported Motor Frame Size:**

- 28mm, 35mm, 42mm, 56mm, 60mm, 86mm

◇ Three Phase Stepper Drive

## AC Input Stepper Drive and DC Input Stepper Drive

**Drive Input Voltage(Typical):**

- AC 120V/240V
- DC 24V/48V

**Control Modes:**

- Pulse Control
- Analog Control
- Stand alone operation

**Inputs and Outputs:**

- 3 Digital Inputs, 1 Digital Output

**Supported Motor Frame Size:** 60mm, 86mm

The **Step-Servo** is an innovative revolution for the world of stepper motor, it enhances the stepper motors with servo technology to create a product with exceptional feature and broad capability.

## Features

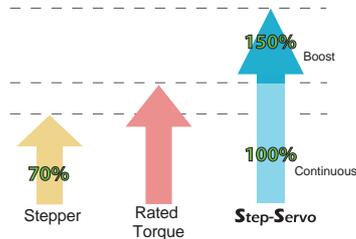

### Fast Response

- When performing fast point-to-point moves, the high torque output and advanced servo control provides a very responsive system far exceeding what can be done with a conventional stepper system.

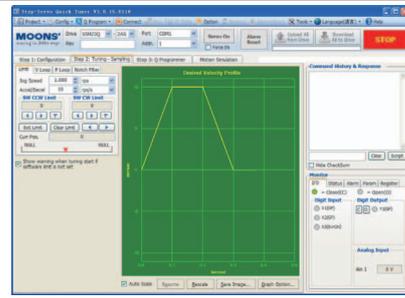

### High Torque

- Because the **Step-Servo** operates in full servo mode, all the available torque of the motor can be used.
- The motor can provide as much as 50% more torque in many applications. High torque capability often eliminates the need for gear reduction.
- Boost torque capability can provide as much as 50% more torque for short, quick moves.

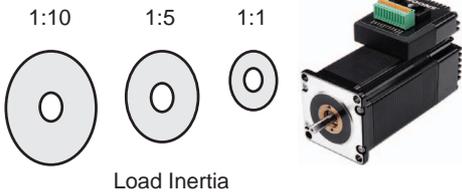

### Motion Monitoring

- For difficult control situations where performing a precise move is necessary, the **Step-Servo** Quick Tuner provide an easy to use interface for performing and monitoring the motion profile.
- Many common parameters such as Actual Speed or Position Error can be monitored to evaluate system performance.
- The monitoring is interactive with the servo tuning capability so that optimum performance can be achieved.

### Easy Tuning

- Pre-defined tuning parameters for maximum control performance and stability.
- Easy selection list provides the level of control desired.
- In most cases NO extra manual tuning is required.

### PC Based Software

- MOONS' **Step-Servo** products support following software application make it easy to configure, tuning, testing and evaluation.
- **Step-Servo** Quick Tuner
  - Q Programmer
  - RS-485 Bus Utility
  - CANopen Test Tool

## Overview of Closed Loop Step-Servo

### TSM Series - Integrated Step-Servo

**Frame Size:** 28mm, 42mm, 56mm, 60mm, 86mm  
**Input Voltage(Typical):** TSM11:24VDC TSM17:12-48VDC  
 TSM23/24:12-70VDC TSM34: 24-70VDC  
**Encoder:** Incremental 20000 counts/rev  
 (only TSM11 encoder 4096 counts/rev)

**Enhanced Intelligence:**  
 ■ Automatic load inertia detection  
 ■ Extended homing and software limit

**Control Modes:**  
 ■ Pulse Control  
 ■ Analog Control  
 ■ Field Bus Control, Daisy Chain  
 ■ Stand alone operation

**Inputs and Outputs:**  
 ■ P Type- 4 Digital Inputs, 3 Digital Outputs, Encoder Outputs  
 ■ S/Q/C/IP Type- 8 Digital Inputs, 4 Digital Outputs, 1 Analog Input

**Communication:**

### SSM Series - Integrated Step-Servo

**Frame Size:** 42mm, 56mm, 60mm  
**Input Voltage(Typical):** SSM17: 12-48VDC SSM23/24: 12-70VDC  
**Encoder:** Incremental 20000 counts/rev

**Easy Wiring with Spring Connectors**

**Control Modes:**  
 ■ Pulse Control  
 ■ Analog Control  
 ■ Field Bus Control  
 ■ Stand alone operation

**Inputs and Outputs:**  
 ■ S/Q Type- 3 Digital Inputs, 1 Digital Output, 1 Analog Input  
 ■ C Type- 3 Digital Inputs, 1 Digital Output

**Communication:**

### TXM Series - IP65 Type Integrated Step-Servo

**Frame Size:** 60mm, 86mm  
**Input Voltage(Typical):** TXM24: 12-70VDC TXM34: 24-70VDC  
**Encoder:** Incremental 20000 counts/rev

**Control Modes:**  
 ■ Pulse Control  
 ■ Analog Control  
 ■ Field Bus Control(Daisy Chain for RS-485 and CANopen)  
 ■ Stand alone operation

**Inputs and Outputs:**  
 ■ S/Q/IP Type- 3 Digital Inputs, 1 Digital Output, 1 Analog Input  
 ■ C Type- 5 Digital Inputs, 3 Digital Outputs

**Communication:**

### RS Series - Step-Servo Motor & Drive Package

**Motor Frame Size:** 28mm, 42mm, 56mm, 60mm, 86mm  
**Input Voltage(Typical):** 24-70VDC  
**Encoder:** Magnetic 4096 counts/rev

**Enhanced Intelligence:**  
 ■ Automatic load inertia detection and switch set stiffness  
 ■ Extended homing and software limit

**Control Modes:**  
 ■ Pulse Control  
 ■ SCL Command Control  
 ■ Stand alone operation

**Inputs and Outputs:**  
 ■ P Type- 4 Digital Inputs, 3 Digital Outputs, Encoder Outputs  
 ■ S/Q Type- 4 Digital Inputs, 3 Digital Outputs

**Communication:**

## Software Features

- Friendly Interface
- Easy setup within just three steps
- Drive setup and configuration
- Servo Tuning and Sampling
- Built-in Q Programmer to create and edit stand-alone programs for Q-compatible drivers
- Motion testing and monitoring
- Write and save SCL command scripts
- Online help integrated
- Support all **Step-Servo** products in TSM/SSM/TXM/SS/RS Series

## About this software

**Step-Servo** Quick Tuner is the PC based software application used to configure, and perform servo tuning, drive testing and evaluation of the **Step-Servo**. System servo control gains, drive functionality, and I/O configuration are set with **Step-Servo** Quick Tuner. It also contains an oscilloscope function to help set the servo control gains. The **Step-Servo** Quick Tuner provides seamless communication with all models whether they have RS-232, RS-485, CANopen or Ethernet communications.

## System Requirements

Microsoft Windows 7, Windows 8, Windows 10, 32-bit or 64-bit, Windows XP.

# RS-485 Bus Utility

Software

## Software Features

- Stream SCL commands from the command line
- Simple interface with powerful capability
- Easy setup with RS-485 for 32 axis network motion control
- Monitoring Status of I/O, drive, alarm and the other nine most useful motion parameters
- Write and save SCL command scripts
- Online help integrated
- Supports all RS-485 drives

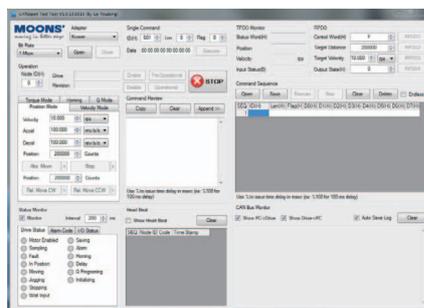

## About this software

If you plan to stream serial commands to MOONS' drive using the Serial Command Language (SCL), to build an RS-485 multi-axis network, you'll need a simple terminal emulator to get familiar with and test your command strings and test the network. RS-485 Bus Utility is the ideal choice because it sends command strings as a packet, with minimal delay between characters, and properly terminated with a carriage return. Other terminal applications send each character as it's typed, making them difficult to use with SCL commands.

## System Requirements

Microsoft Windows 7, Windows 8, 32-bit or 64-bit, Windows XP.

# CANopen Test Tool

## Software Features

- Friendly User Interface
- Multiple operation Mode Support
- Multi-Thread, High Performance
- CAN bus monitor and log function
- Kvaser/PEAK/ZLG adapter support

## System Requirements

Microsoft Windows 7, Windows 8, Windows 10, 32-bit or 64-bit, Windows XP.

# TSM Integrated Step-Servo

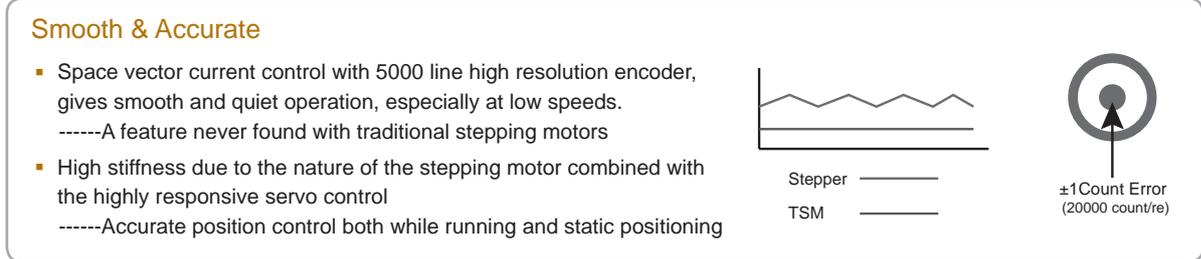

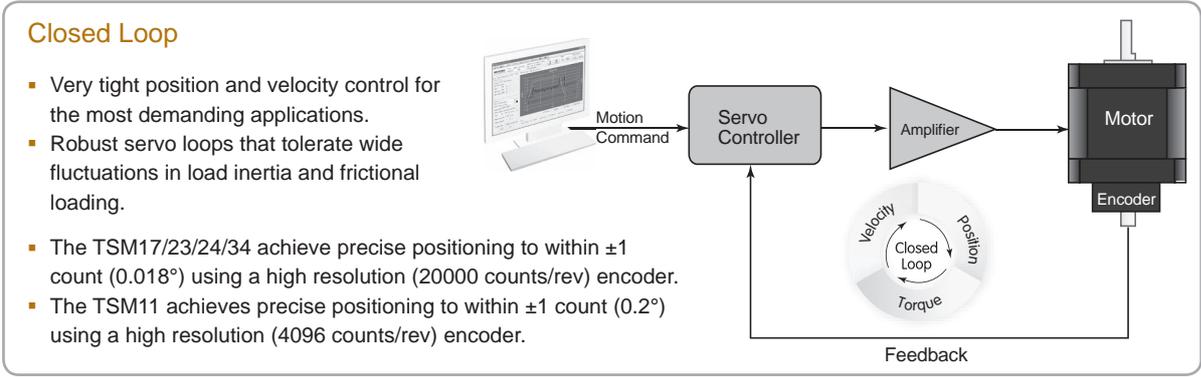

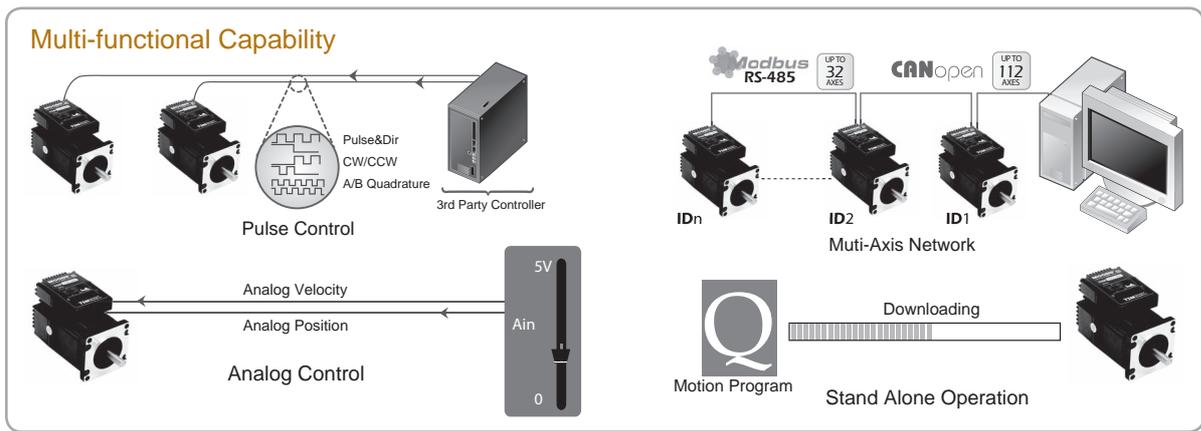

New  
3<sup>rd</sup> Generation Step-Servo

- Multi-axis field bus control
- Compact all-in-one solution
- Intelligent built-in controller
- Efficient Smooth Accurate Fast
- Enhanced motor Optimized design

The **Step-Servo** is an innovative revolution for the world of stepper motor, it enhances the stepper motors with servo technology to create a product with exceptional feature and broad capability. TSM is MOONS' 3<sup>rd</sup> generation integrated **Step-Servo** and compact motor+drive+encoder+controller all-in-one solution. With improved technology, TSM upgrades significant key features based on 2<sup>nd</sup> generation SSM and operates more efficient and intelligent.

Appendix Glossary

### Low Heating/High Efficiency

- The TSM uses only the current required by the application, generating minimum heat output.
- When the motor is not moving, the current can be nearly zero resulting in extremely low heat output.
- Being able to use almost 100% of the available torque allows for more efficient operation and may allow a smaller motor size.

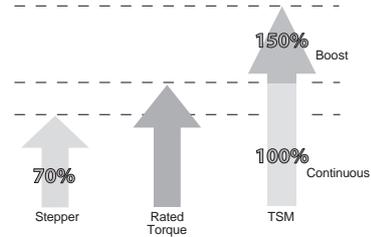

### Fast Response

- When performing fast point-to-point moves, the high torque output and advanced servo control provides a very responsive system far exceeding what can be done with a conventional stepper system.

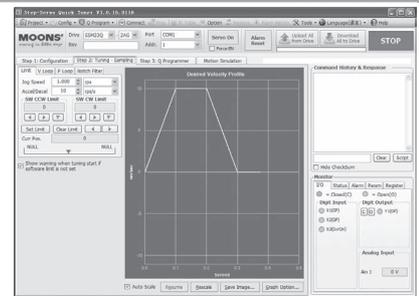

### High Torque

- Because the TSM operates in full servo mode, all the available torque of the motor can be used.
- The motor can provide as much as 50% more torque in many applications. High torque capability often eliminates the need for gear reduction.
- Boost torque capability can provide as much as 50% more torque for short, quick moves.

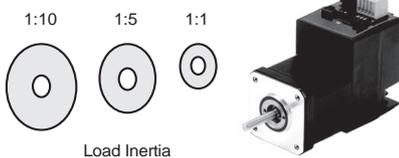

### Motion Monitoring

- For difficult control situations where performing a precise move is necessary, the **Step-Servo** Quick Tuner provide an easy to use interface for performing and monitoring the motion profile.
- Many common parameters such as Actual Speed or Position Error can be monitored to evaluate system performance.
- The monitoring is interactive with the servo tuning capability so that optimum performance can be achieved.

### Easy Tuning

- Pre-defined tuning parameters for maximum control performance and stability.
- Easy selection list provides the level of control desired.
- In most cases NO extra manual tuning is required.

### Key Enhancement based on SSM family(2<sup>nd</sup> Generation)

- Up to 8 digital inputs, 4 digital outputs and 1 analog input for S/Q/C types (TSM17/23/24/34 only)
- A/B/Z differential encoder signal output supported for P type (TSM17/23/24/34 only)
- Automatic load inertia detection
- On board daisy chain connection for field bus control (RS-485, Modbus/RTU, CANopen, TSM17/23/24/34 only)
- On board daisy chain over Ethernet on TSM34 only
- Multiple homing features for S/Q types
- Software limit for S/Q types
- Auxiliary power input for Keep Alive function (TSM34 only)

## ■ TSM Lineup

### ◇ Torque and Frame size

Model	Frame Size(mm)	Torque(N·m)	Supply Voltage(VDC)
TSM11□-1RM	28	0.065	15-30
TSM11□-2RM		0.08	
TSM11□-3RM		0.125	
TSM17□-1□G	42	0.3	12-48
TSM17□-2□G		0.5	
TSM17□-3□G		0.6	
TSM17□-4□G	56	0.75	12-70
TSM23□-2□G		0.9	
TSM23□-3□G		1.5	
TSM23□-4□G	60	2.5	24-70
TSM24□-3□G		2.5	
TSM34□-1□G		2.7	
TSM34□-3□G	86	5.2	24-70
TSM34□-5□G		6.7	
TSM34□-6□G		8.2	

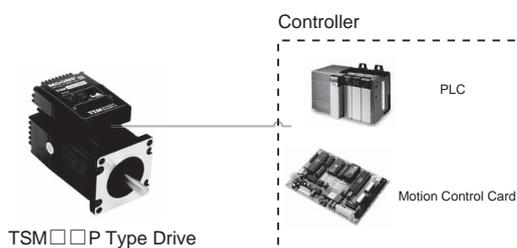

### ◇ Control Modes

#### -P Pulse Input type(Only TSM17/23/24/34)

Controlled via pulse generator.

##### Main Features

- Accepts three types of pulse signal input as Pulse&Direction, CW/CCW and A/B Quadrature
- Encoder signal output, A/B/Z differential

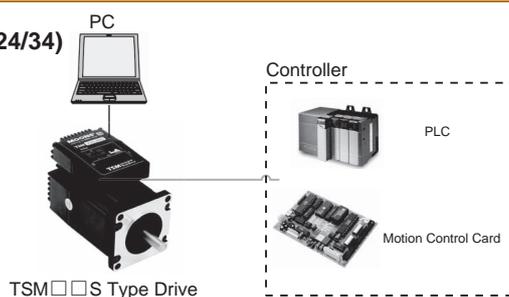

#### -S Basic type with serial communication(Only TSM17/23/24/34)

Controlled via pulse signals, analog signal or MOONS' SCL streaming series commands.

##### Main Features

- Pulse control
- Analog control
- Host real time control using SCL via RS-232/RS-485
- Up to 32 axes per channel for RS-485

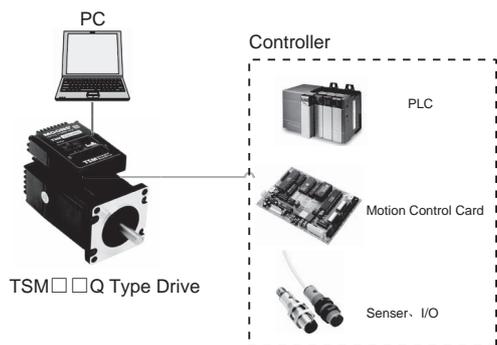

#### -Q Built-in programmable motion controller (Includes Modbus/RTU Type)

Run stand-alone with sophisticated and functional programs. Commands for controlling motion, inputs & outputs, drive configuration and status, as well as math operations, register manipulation, and multi-tasking.

##### Main Features

- Stand-alone operation plus Serial host control
- Math operations
- Register manipulation
- Multi-tasking
- Includes all features of S type
- Modbus/RTU network, up to 32 axes per channel
- Dual port Ethernet communication, eSCL network (TSM34 only)

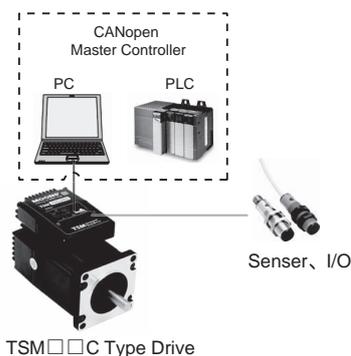

#### -C CANopen type

Operates on a CANopen communication network and conforms to CiA301 and CiA402. It supports running stored Q programs via MOONS'-specific CANopen objects.

##### Main Features

- CANopen network
- Up to 112 axes per channel
- Objects for Q programming

Communication Cable	Twisted Shielded Cable
Node ID Setting	On Board Rotary Switch: Lower 4 bits 0H-FH <b>Step-Servo</b> Quick Tuner: Upper 3 bits 00H-7FH

### ◇ Ethernet Specifications

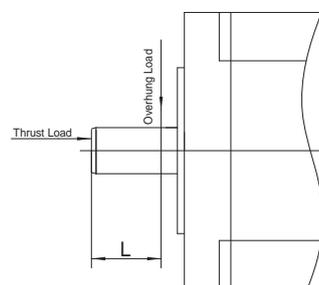

Interface	Ethernet (eSCL)
Baud Rate(bps)	100Mbps
Maximum Distance	100 meters between 2 devices
Communication Cable	Shielded twisted pair cable (CAT5e or CAT6)
Address Setting	Via Step-Servo Quick Tuner software

## ■ General Specifications

TSM Integrated Step-Servo		
Insulation Class	Class B(130°C)	
Insulation Resistance	100MΩ/DC500V	
Dielectric Strength	500VAC 1 minute	
Operating Environment	Ambient Temperature	0~+40°C(non-freezing)
	Ambient Humidity	90% or less(non-condensing)
	Atmosphere	No corrosive gases, dust, water or oil
Degree of Protection	IP20	

## ■ Permissible Overhung Load and Permissible Thrust Load(Unit:N)

◇ Regeneration Clamp

**P/N: RC880**

When using regulated power supply you may encounter a problem with regeneration. The kinetic energy caused by regeneration is transferred back to the power supply. This can trip the overvoltage protection of a switching power supply, causing it to shut down.

MOONS' offer the RC880 "regeneration clamp" to solve this problem. If in doubt, use an RC880 for your first installation. If the "regen" LED on the RC880 never flashes, you don't need the clamp.

## ■ Connection and Operation(-P Pulse Input Type)

### ◇ Names and Functions of Parts

#### ① LED Displays

Indication	Color	Function	When Activated
Operation	Green	Power on indication	When driver is powered up
Alarm	Red	Alarm indication	Flashes when in protection
Operation	Yellow	Auxiliary Power on indication	When AUX powered up

#### ■ LED Error Codes

TSM uses red and green LEDs to indicate status. When the motor is enabled, the green LED flashes slowly. When the green LED is solid, the motor is disabled. Errors are indicated by combinations of red and green flashes as shown in [Page of Alarm information](#).

Apart from the main power supply, TSM34 also has an auxiliary power input (AUX power) for keep alive function of the drive. When the main power supply is off, the AUX power will keep the logic power on, allowing the drive to remember its state data (motor position, etc.). This allows the motor to resume operation from its previous position without a homing routine when the main power is switched back on.

### ◇ Wiring Diagram

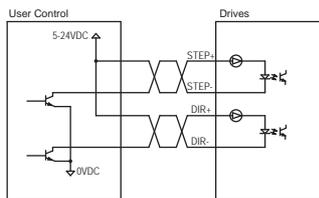

### ◇ Description of Input/Output Signals

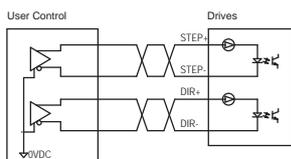

Input (output) "ON" indicates that the current is sent into the photocoupler (transistor) inside the driver. Input (output) "OFF" indicates that the current is not sent into the photocoupler (transistor) inside the driver. The input/output remains "OFF" if nothing is connected.

- Circuit above shows when pulse input is line driver type
- Pulse signal input range 5-24VDC
- Digital signal input range 5-24VDC
- Use a multi-core, twisted-pair shielded wire of AWG28 to 24 for the control input/output signal line, and keep wiring as short as possible
- Provide safety distance between the control I/O signal lines and power lines

### ● Pulse Input Circuit and Sample Connection With Open Collector Output

### With Line Driver Output

### ● Pulse Input Mode

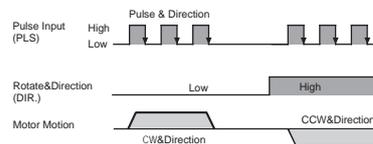

#### Pulse & Direction

When the Pulse input is turned ON while the DIR input is ON, the motor will rotate by one step in one direction.

When the Pulse input is turned ON while the DIR input is OFF, the motor will rotate by one step the other direction.

\*Direction definition of DIR input can be configured via **Step-Servo Quick Tuner**.

The chart below shows motor configured as while the DIR input is ON, the motor will rotate by CW direction

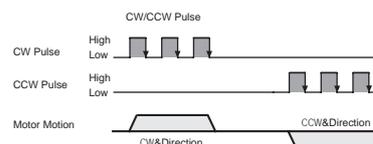

#### CW/CCW Pulse

When the X1 input is turned ON, the motor will rotate by one step in One direction. When the X2 input is turned ON, the motor will rotate by one step in the other direction.

\*Direction definition can be configured via **Step-Servo Quick Tuner**.

The chart below shows motor configured as while the X1 input is ON, the motor will rotate by one step in CW direction

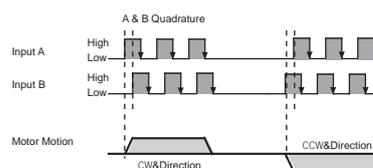

#### A & B Quadrature

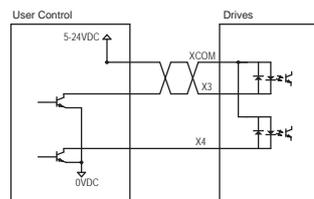

The motor will move according to signals that are fed to the drive from a two channel incremental master encoder.

Direction definition can be configured via **Step-Servo Quick Tuner**. Direction is determined via which channel leads the other.

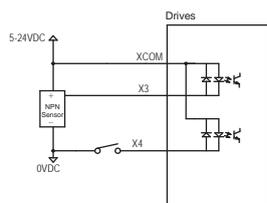

The chart below shows motor configured as while X1 Leads X2, the motor will rotate by CW direction.

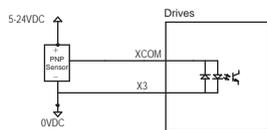

### ● Digital Input Circuit and Sample Connection With Open Collector Output

### With NPN type Sensor

### With PNP type Sensor

### Servo ON Input

X3 can be configured as Enable signal to excite the motor.

### Alarm Reset Input

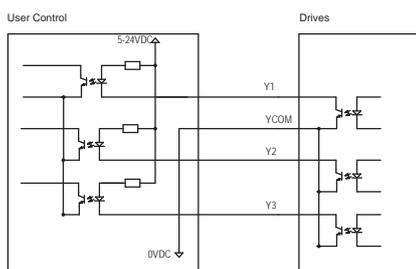

X4 can be configured as Reset signal to clear the alarm and turns to normal status as Servo OFF.

**Caution:** Please make sure there's no error in system before you clear an Alarm.

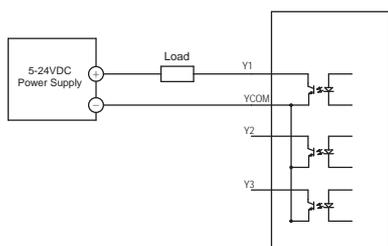

### ◇ Connecting using Digital Outputs

- Output Circuit and Sample Connection

### Open Collector Output

### Driving external load

### Alarm Output

Y1 can be configured as signal output if a fault occurs, meanwhile the red LED will flash.

### In Position Output

Y2 can be configured as signal output when position error less than a user-defined count value.

### Moving Output

Y2 can be configured as signal output when motor is moving.

### Brake Output

Y3 can be configured as signal output to release brake.

### Timing Output

Y3 can be configured as Timing signal output, it will turn ON every time the motor output shaft rotates by  $7.2^\circ.50$  pulses output with one rotation.

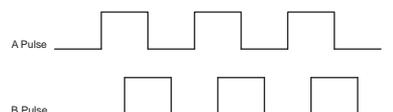

### Tach Output

Y3 can be configured as Tach signal output, tach output produces pulses relative to the motor position with configurable resolution: 100, 200, 400, 800, 1600.

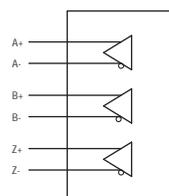

### ● Encoder Output

- Differential pulse output with channel A/B/Z
- While motor rotates one revolution, A-Phase/B Phase generate total 20,000 counts, Z-Phase generates one signal.
- The B-Phase output has a  $90^\circ$  phase difference with respect to the A-Phase output. Phase A Leads B  $90^\circ$  while motor rotates by CW direction, phase B leads A  $90^\circ$  while motor rotates by CCW direction.

### Pulse Output Signal Chart

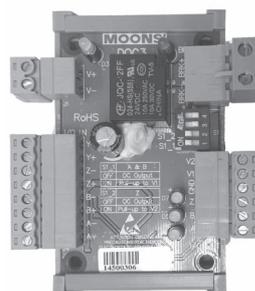

### Encoder Output Circuit

**Note:** If the controller cannot support differential signal input, you can choose the module that it can convert the differential signal into open-collector output.

### CW/CCW Limit Input

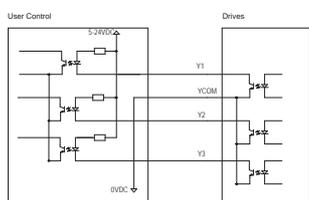

X7 can be configured as CW limit signal input, X8 can be configured as CCW limit signal input.

When either limit signal activates, motor will Servo OFF immediately and indicate an Alarm. (Unless motors works in Homing mode and defined otherwise)

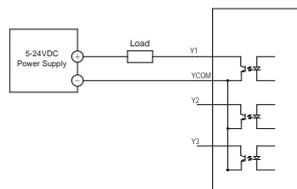

### ◇ Connecting using Digital Outputs

### ● Output Circuit and Sample Connection

#### Open Collector Output

### Driving external load

### Alarm Output

Y1 can be configured as signal output if a fault occurs, meanwhile the red LED will flash.

### In Position Output

Y2 can be configured as signal output when position error less than a user-defined count value.

### Moving Output

Y2 can be configured as signal output when motor is moving.

### Brake Output

Y3 can be configured as signal output to release brake.

### Timing Output

Y4 can be configured as Timing signal output, it will turn ON every time the motor output shaft rotates by 7.2°. 50 pulses output with one rotation.

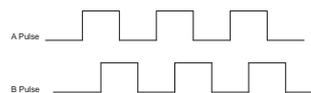

### Tach Output

Y4 can be configured as Tach signal output, tach output produces pulses relative to the motor position with configurable resolution: 100, 200, 400, 800, 1600.

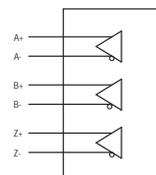

### ● Encoder Output

- Differential pulse output with channel A/B/Z
- While motor rotates one revolution, A-Phase/B Phase generate total 20,000 counts, Z-Phase generates one signal.
- The B-Phase output has a 90° phase difference with respect to the A-Phase output. Phase A Leads B 90° while motor rotates by CW direction, phase B leads A 90° while motor rotates by CCW direction.

### Pulse Output Signal Chart

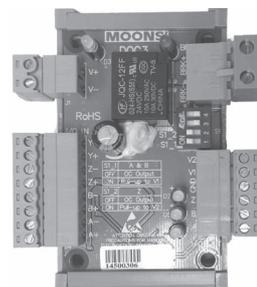

### Encoder Output Circuit

**Note:** If the controller cannot support differential signal input, you can choose the module that it can convert the differential signal into open-collector output.

Module part number: DOC3

## ■ Connection and Operation(-IP EtherNet/IP Type)

### ◇ Names and Functions of Parts

#### TSM34Q/IP Ethernet version

#### ① LED Displays

Indication	Color	Function	When Activated
Operation	Green	Power on indication	When driver is powered up
Alarm	Red	Alarm indication	Flashes when in protection
Operation	Yellow	Auxiliary Power on indication	When AUX powered up

#### ■ LED Error Codes

TSM uses red and green LEDs to indicate status. When the motor is enabled, the green LED flashes slowly. When the green LED is solid, the motor is disabled. Errors are indicated by combinations of red and green flashes as shown in [Page of Alarm information](#).

Apart from the main power supply, TSM34 also has an auxiliary power input (AUX power) for keep alive function of the drive. When the main power supply is off, the AUX power will keep the logic power on, allowing the drive to remember its state data (motor position, etc.). This allows the motor to resume operation from its previous position without a homing routine when the main power is switched back on.

#### ② Power Connector

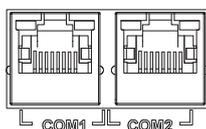

P/N: Phoenix Contact 5452570

### ◇ Wiring Diagram

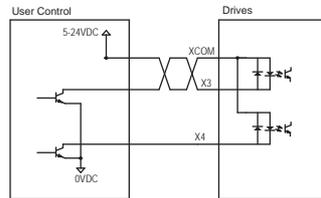

### ◇ Description of Input/Output Signals

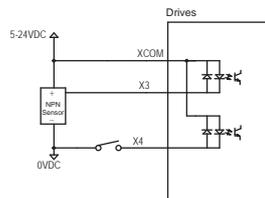

Input (output) "ON" indicates that the current is sent into the photocoupler (transistor) inside the driver. Input (output) "OFF" indicates that the current is not sent into the photocoupler (transistor) inside the driver. The input/output remains "OFF" if nothing is connected.

- Circuit above shows when pulse input is line driver type
- Pulse signal input range 5-24VDC
- Digital signal input range 5-24VDC
- Use a multi-core, twisted-pair shielded wire of AWG28 to 24 for the control input/output signal line, and keep wiring as short as possible
- Provide safety distance between the control I/O signal lines and power lines

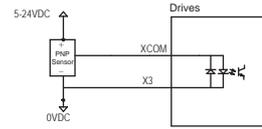

- Digital Input Circuit and Sample Connection With Open Collector Output

### With NPN type Sensor

### With PNP type Sensor

### Servo ON Input

X3 can be configured as Enable signal to excite the motor.

### Alarm Reset Input

X4 can be configured as Reset signal to clear the alarm and turns to normal status as Servo OFF.

**Caution:** Please make sure there's no error in system before you clear an Alarm.

### CW/CCW Limit Input

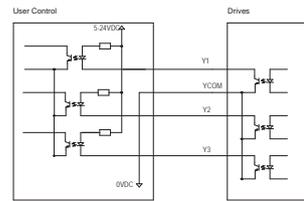

X7 can be configured as CW limit signal input, X8 can be configured as CCW limit signal input.

When either limit signal activates, motor will Servo OFF immediately and indicate an Alarm. (Unless motors works in Homing mode and defined otherwise)

## Alarm Information

### Status Display via LEDs

TSM uses red and green LEDs to indicate status. When the motor is enabled, the green LED flashes slowly. When the green LED is solid, the motor is disabled. Errors are indicated by combinations of red and green flashes as shown below.

Code	Error
●	No alarm, motor disabled
●●	No alarm, motor enabled
●●●	<b>Position limit</b>
●●●●	Move while disabled
●●●●●	CCW limit
●●●●●●	CW limit
●●●●●●●	<b>Drive over temperature</b>
●●●●●●●●	<b>Internal voltage out of range</b>
●●●●●●●●●	Blank Q segment
●●●●●●●●●●	<b>Power supply over voltage</b>
●●●●●●●●●●●	Power supply under voltage
●●●●●●●●●●●●	Non-volatile double error
●●●●●●●●●●●●●	<b>Over current</b>
●●●●●●●●●●●●●●	Current foldback
●●●●●●●●●●●●●●●	<b>Open winding</b>
●●●●●●●●●●●●●●●●	<b>Bad encoder</b>
●●●●●●●●●●●●●●●●●	Communication error
●●●●●●●●●●●●●●●●●●	Flash memory error

● Show Red; ● Show Green.

NOTE: Items in **bold italic** represent drive faults, which automatically disable the motor.

### Auxiliary Power (AUX) LED (only TSM34)

If the auxiliary power is connected, this yellow LED will be solid when the power is on.
